

Redefine the server

HPE ProLiant server with ClearOS

A simple, secure, affordable operating system that will change the way you talk about IT

Three reasons you're going to love ClearOS on HPE ProLiant servers

Simplicity—Intuitive, web-based GUI plus built-in application marketplace

Security—Trusted and proven selection of security apps and functions

Affordability—No upfront costs, and pay for apps only as you grow

Do you have to choose between on-premises and cloud?

Many businesses like yours consider the cloud because of the perceived benefits of simplicity and lower costs. But with today's security and availability requirements for applications and data, you still need robust, on-premises infrastructure.

HPE ProLiant servers with ClearOS can help you keep one foot on the ground by giving you the simplicity and cost savings you're looking for in the cloud—with the security and availability only on-premises solutions can provide.

Hewlett Packard Enterprise and ClearCenter are partnering to offer ClearOS preinstalled exclusively on **HPE ProLiant rack and tower servers**. HPE ProLiant servers with ClearOS give you a powerful compute platform with a simple, secure, and affordable operating system (OS) you can access via an intuitive web-based graphical user interface (GUI) for anytime, anywhere access.

With built-in access to the ClearOS Marketplace of over 100 apps—and growing—you can decide which applications to run now, and then pay as you grow, no matter where you are with your business.

Opting for ClearOS as the operating system on your HPE ProLiant server will help you lower the cost of accessing easy-to-use, on-premises solutions without sacrificing security.

What is ClearOS?

A flexible OS for your server and security needs

Hewlett Packard Enterprise and ClearOS are redesigning the server, as you know it by expanding the server's capabilities to include Intelligent Gateway and Network services that can be custom tailored to suit any deployment.

Remember when you used to need separate devices for making a phone call, taking a picture, listening to music, and even using a flashlight? Then, the smart phone came along and put all those functions—and many more—right at the tip of your finger.

ClearOS is like that—but for your server, networking, and security needs. You can now replace your old individual Gateway, Server, and Network appliances and hardware components with ClearOS running on a single HPE server. ClearOS gives you the options, power, and flexibility to easily pick and choose which Gateway, Server, and Network features to deploy because ClearOS services run as integrated apps you install via the included ClearOS Marketplace.

The ClearOS Marketplace features more than 100 apps including multiple firewall options, content filtering, intrusion prevention/detection with daily signature updates, dynamic VPN, reporting, bandwidth control, directories, domains, databases, backups, email, on-premises/cloud storage, hybrid cloud integrations, and a lot more. How you deploy

your overall solution is up to you—use ClearOS and one HPE server to protect and manage your entire environment, or select just the apps you need to fill gaps in your infrastructure.

ClearOS is a powerful IT solution that is easy to deploy and maintain, thanks to the elegant user interface that is completely web-based, making it available through any browser on almost any web-connected device.

What's more, ClearOS is an open source Linux® server OS that can be integrated with existing IT deployments including Microsoft® Windows® environments. In fact, it's a trusted and proven model with more than 400,000 current deployments worldwide.

A winning combination

When you combine ClearOS with HPE ProLiant servers—offering you the power, range of choices, and ease of use to take on the most challenging workloads with simplicity and cost-effectiveness—you can see why we say we're redefining the server.

Go ahead and jump in

With Hewlett Packard Enterprise and ClearOS, you don't have to decide between convenience and control. Call your HPE or Authorized Partner sales rep to find out more about ClearOS on HPE ProLiant servers, today.
